

# Custom Size Magnet Design Instructions

1) Indicate desired cut line with a 100% magenta vector path. Include at least 1/8" white space or bleed.

NOTE: Cut line edges must be rounded to a 3/16" circle or larger. Tighter corners and sharp edges will not cut consistently and may need to be edited.

Use the 3/16" circle below to check all cut edges and corners, including any interior cutouts.

3/16 Diameter  
Test Circle

GOOD: All cut edges pass the 3/16" circle test

BAD: Sharp corners and interior cutouts smaller than 3/16" will not be possible

GOOD: All cut edges pass the 3/16" circle test

GOOD: Interior cutouts are large enough

GOOD: Art includes adequate white space

BAD: Not enough white space/bleed may cause art to touch the edge or be cut off

BAD: Sharp corners and interior cutouts smaller than 3/16" will not be possible

GOOD: All cut edges pass the 3/16" circle test

GOOD: Art includes adequate white space

BAD: Not enough white space/bleed may cause art to touch the edge or be cut off

BAD: Sharp corners and interior cutouts smaller than 3/16" will not be possible

**2) Measure total magnet size including cut line to determine the Area in square inches:**

**WIDTH x HEIGHT = Area**

**(3.4) x (2.4) = 8.16 square in.**

**= ITEM STK9**

**WIDTH x HEIGHT = Area**

**(3.54) x (3.57) = 12.63 square in.**

**= ITEM STK16**

HEIGHT = 2.4"

WIDTH = 3.4"

WIDTH = 3.57"

WIDTH = 3.54"

**3) Order the item corresponding to the area of your custom magnet:**

**Up to 4 square in. (ITEM MAG4)**

**Up to 9 square in. (ITEM MAG9)**

**Up to 16 square in. (ITEM MAG16)**

# MAG4 (Up to 4 square inches)

Import your artwork and use a magenta path to indicate the desired cut line.

Add at least 1/8" white space or bleed.

Sharp corners and curves tighter than the edge of a 3/16" circle are not recommended.

All edges should be smooth and rounded for consistent cutting and easy peeling.

Multiply the Width and Height to determine the area of the magnet.
