# CustomCut™ Sticker Design Instructions

1) Indicate desired cut line with a 100% magenta vector path. Include at least 1/8" white space or bleed.

NOTE: Cut line edges must be rounded to a 3/16" circle or larger. Tighter corners and sharp edges will not cut consistently and may need to be edited.

Use the 3/16" circle below to check all cut edges and corners, including any interior cutouts.

3/16 Diameter
Test Circle

GOOD: All cut edges pass the 3/16" circle test

BAD: Sharp corners and interior cutouts smaller than 3/16" will not be possible

1/8"

GOOD: All cut edges pass the 3/16" circle test

GOOD: Interior cutouts are large enough

GOOD: Art includes adequate white space

1/8"

BAD: Not enough white space/bleed may cause art to touch the edge or be cut off

BAD: Sharp corners and interior cutouts smaller than 3/16" will not be possible

✔

GOOD: All cut edges pass the 3/16" circle test

GOOD: Art includes adequate white space

1/8"

✗

BAD: Not enough white space/bleed may cause art to touch the edge or be cut off

BAD: Sharp corners and interior cutouts smaller than 3/16" will not be possible

1/8"

2) Measure total sticker size including cut line to determine the Area in square inches:

WIDTH x HEIGHT = Area

(3.4) x (2.4) = **8.16 square in.**

= ITEM STK9

WIDTH x HEIGHT = Area

(3.54) x (3.57) = **12.63 square in.**

= ITEM STK16

HEIGHT = 2.4"

WIDTH = 3.4"

WIDTH = 3.57"

WIDTH = 3.54"

3) Order the item corresponding to the area of your custom sticker:

Up to 9 square in. (ITEM STK9)

Up to 16 square in. (ITEM STK16)

Up to 25 square in. (ITEM STK25)

Up to 36 square in. (ITEM STK36)
